

# SOLVING 10X10 HEX

## TCGA WORKSHOP KEYNOTE PRESENTATION

pawlewicz + hayward@ualberta.ca

computing UAlberta

2013 june 29

## THANK YOU

- invitation Prof Mark Kayll UMontana
- solving 10×10 Hex joint with Jakub Pawlewicz
- builds on work with B Arneson, P Henderson
- machine Martin Müller
- photo courtesy MIT Museum, MIT, Cambridge MA
- Natural Sciences and Engineering Research Council of Canada

- 1 HEX

- 3 SEARCH
- 4 10x10

# 1942 HEX

## RULES

- 2 players, alternate moves
- win: connect your two sides

# 1942 HEX

## RULES

- 2 players, alternate moves
- win: connect your two sides

## N X N HEX: 1ST-PLAYER WIN

### PROOF

- lemma: extra X-cell ok for player X
- lemma: no draws
- suppose P2 has win strategy S2
- then P1 can move anywhere, forget move, and follow S2
- thus P1 has win strategy, contradiction  $\square$

# NO-DRAW

# NO-DRAW

# $N \times N+1$ HEX: LONGER-SIDE WIN

# $N \times N+1$ HEX: LONGER-SIDE WIN

# 1951 SHANNON MACHINE

# 1951 SHANNON MACHINE

- play on any graph
- two marked vertices
- black move: 'short' any vertex (make nbrs clique)
- white move: 'cut' any vertex (delete)
- black wins iff two marked vertices are shorted (connected)
  
- generalizes Hex

# 1951 SHANNON MACHINE

# 1951 SHANNON MACHINE

# 1951 SHANNON MACHINE

## PROVABLY HARD

- 1975 Even & Tarjan
- 1981 Stefan Reisch
- 2000 Clay Math Inst

Shannon v-switching: PS-c

Hex: PS-c

P vs NP: \$1 000 000

## F-DFPNS

- PNS Allis et al

## F-DFPNS

- PNS Allis et al
- DFPNS Nagai

## F-DFPNS

- PNS Allis et al
- DFPNS Nagai
- DFPNS in Hex ?

## F-DFPNS

- PNS Allis et al
- DFPNS Nagai
- DFPNS in Hex ?
- ...requires non-incremental H-search :(

## F-DFPNS

- PNS Allis et al
- DFPNS Nagai
- DFPNS in Hex ?
- ...requires non-incremental H-search :(
- ...uniform branching factor :(

## F-DFPNS

- PNS Allis et al
- DFPNS Nagai
- DFPNS in Hex ?
- ...requires non-incremental H-search :(
- ...uniform branching factor :(
- idea: move ordering + DFPNS = F-DFPNS

## F-DFPNS (1)

- expand node
- consider first  $b + \lceil f \times 6 \rceil = 4$  (of 6) live children

## F-DFPNS (2)

- discover move 3 loses
- consider first  $b + \lceil f \times 5 \rceil = 4$  (of 5) live children

## F-DFPNS (3)

- discover move 5 loses
- consider first  $b + \lceil f \times 4 \rceil = 3$  (of 4) live children

## F-DFPNS (4)

- discover move 2 wins, so ...
- ...root solved without exploring 6th move

# SOLVING 10x10

- stronger VC computations
- scalable parallel DFPN S

# PAWLEWICZ: STRONGER VC COMPUTATIONS

- faster and/or-rule VC computation
- limit form of new VCs, so never redundant
- find fewer VCs, but solve 2 to 10 times faster

## EXAMPLE: VCS TO SIDE

## EXAMPLE: SEMIS

## EXAMPLE: SEMIS

## EXAMPLE: SEMIS

## EXAMPLE: SEMIS

## GREEDY UNION SEMIS TO GET FULL

## BLOCK CELL TO GET ANOTHER VC

## BLOCK CELL TO GET ANOTHER VC

## BLOCK CELL TO GET ANOTHER VC

## BLOCK CELL TO GET ANOTHER VC

# PAWLEWICZ: SCALABLE PARALLEL DFPNS

- parallel PNS: keep tree in memory? e.g. I-Chen Wu connect6
- Hex: leaf computations fast, so tree too big
- how to assign jobs to processors?
  - jobs too long: computation redundant
  - jobs too short: too much client/server traffic
  - solution: MaxWorkPerJob

## SP DFPN S FEATURES

- $1+\epsilon$  variant of DFPN
- advanced TT resolution: upon collision, search next  $k$  (say 4) cells for empty location; if none found, overwrite location with smallest work job
- once node computation assigned to leaf, use virtual win/loss so new threads go elsewhere
- ...so compute virtual (dis)proof numbers
- shared TT: many-read / 1-write locks
- tune MaxWorkPerJob
- for Hex: use Focussed DFPN S

## SP DFPN S PERFORMANCE

- speedup test: 8 hardest 8x8 openings, 8 11x11 positions
- speedup performance: 11.8 on 16 threads (.74)
- solved all 9x9 openings
- solved centre 10x10 opening

# SP DFPN S PERFORMANCE
